

Travel Booking Platform Using Agile Methodology

1. Abstract

A Travel Booking Platform is an online system that allows users to book travel services such as flights, hotels, and tour packages. With the increase in internet usage, people prefer online booking instead of visiting travel agencies. This saves time and provides multiple options at one place.

This project aims to develop a **Travel Booking Platform using Agile methodology**. The system allows users to register, search for travel options, book tickets, make online payments, and view booking history. All booking and user data is stored securely in a centralized database.

Agile methodology is used to develop the system in small development cycles called sprints. Each sprint includes planning, design, coding, testing, and review. Agile allows flexibility and makes it easy to add or modify features based on user feedback.

The proposed system is user-friendly, reliable, and efficient. It reduces manual work and improves customer experience. In the future, features like mobile applications, real-time notifications, and AI-based recommendations can be added.

2. Introduction

2.1 Introduction

A Travel Booking Platform helps users plan and book their travel online easily.

2.2 Problem Identification

- Manual booking is slow
- Limited travel options
- High chances of errors

2.3 Need of the Project

- Easy online booking
- Fast access to travel details
- Secure payments

2.4 Project Scheduling

The project is divided into sprints using Agile methodology.

2.5 Objectives

- Provide online travel booking
- Manage bookings efficiently
- Improve customer satisfaction

3. Software Requirement Specification

3.1 Purpose

To develop an online travel booking system for managing travel services.

3.2 Scope

Used by travelers, travel agencies, and service providers.

3.3 Hardware / Software Requirements

Hardware

- Computer / Laptop
- Minimum 4 GB RAM

Software

- OS: Windows / Linux
- Language: Java / Python
- Database: MySQL

3.4 Tools

- VS Code / Eclipse
- Web Browser

3.5 Software Process Model

Agile Software Development Model.

4. System Design

4.1 Data Dictionary

Field Name	Description
UserID	Unique user ID
Name	User name
Email	Email address
BookingID	Booking number
PaymentStatus	Payment details

4.2 ER Diagram

Entities to write inside boxes:

- USER (UserID, Name, Email)
- BOOKING (BookingID, Date, Status)
- PAYMENT (PaymentID, Amount, Status)

4.3 DFD – Level 0

Flow:

User → Travel Booking System → Confirmation

System ↔ Database

4.4 Use Case Diagram

fdddfdf

Use Cases:

- Register / Login
- Search Travel
- Book Ticket
- Make Payment
- View Booking

4.5 System Flow Chart

Flow:

Start → Login → Search → Book → Payment → Confirmation → End

5. Implementation

5.1 Program Code

The system is implemented using Java/Python with MySQL database.

5.2 Output Screens

- Login Page
- Search Results Page
- Booking Confirmation Page

6. Testing

6.1 Test Data

- Valid booking details

- Invalid login details

6.2 Test Result

All modules work correctly and give expected output.

7. User Manual

7.1 How to Use

1. Register and login
2. Search travel options
3. Book tickets
4. Make payment
5. View booking history

7.2 Screen Layout

Simple and user-friendly interface.

8. Project Applications and Limitations

Applications

- Online travel websites
- Travel agencies
- Tourism industry

Limitations

- Internet connection required
- Payment gateway dependency

9. Conclusion and Future Enhancement

The Travel Booking Platform makes travel planning easy and efficient. Agile methodology ensures flexible and fast development. Future enhancements include mobile apps, real-time notifications, and AI-based recommendations.
